

Chilled Water Fan Coil Unit

Maxxum[™]
Model:HCCA Size 10~24

The Best Choice for Comfort

The HCCA High Capacity Chilled Water Fan Coil Unit

Designed for applications that required 1000 CFM to 2400 CFM fan coil unit.

■ Features

- Flexible
With rear, bottom return plenum or without plenum
- High Capacity
Three, four or six rows of cooling coils with Trane designed Wavy 3B Aluminum Slit Fin
- Two or Four Pipe System
Cooling only or cooling/heating capability
- Rigid Casing
1.2 mm galvanized steel with 9 mm non-flammable PU insulation
- Independently levelable, one piece stamped drain pan
- Permanently lubricated motor bearings
- Balanced motor and fan
- Factory run tested
- Meet BS 476 fire code

■ Benefits

- Fits most chilled water applications
- Reduced height for normal and specialized installations
- One unit provides total comfort... Cooling and heating
- Prevents moisture on the casing
- Can be angled to accelerate condensate drainage
- Minimum maintenance
- Low vibration and noise
- Reliable Operation

■ HCCA Fan Coil Application Example

Such environment must be quiet and comfortable Trane have paid special attention to the noise in fan coil units, We use balanced motors, fan and permanently lubricated motor bearings to eliminate noise.

HCCA fan coil units are the best solution for separated and independent air conditioning system. They have been used successfully to avoid cross contamination from bacteria.

DIGIT 13 - Plenum / Filters

N = Without Return Plenum / No Filter

F = With Rear Return Plenum / No Filter

G = With Rear Return Plenum / 25mm Aluminum Media

P = With Rear Return Plenum / 25mm Foam Media

Q = With Bottom Return Plenum / No Filter

R = With Bottom Return Plenum / 25mm Aluminum Media

T = With Bottom Return Plenum / 25mm Foam Media

S = Special

DIGIT 14 - Design Sequence

C = Third

Notes:

1. The wiring of thermostat or zone sensor to motors, ZN or valves must be done on job site.
2. Non-flammable PU insulation meet the regulation of BS476 part7 class 1 and part6 class O.

Product Specification

■ Basic Unit

The Trane Model HCCA fan coil unit consisting rigid galvanized steel casing, copper tube/aluminum fin coil type heat exchanger, fan board assembly, manual coil air vent with drain pan, junction box with terminal strip.

Unit casing manufactured by 1.2mm thick galvanized steel with internal insulation of 9mm thickness, 108 kg/m³ high density non-flammable PU foam.

The standard unit is without return air plenum, or selected with bottom return air plenum or rear return air plenum in option, while filter is another option associated to the return air plenum.

■ Fan Board

All motors, with internal thermal temperature cutout above 140°C, are permanent split-capacitor, three speed, tap wound, induction type for maximum efficiency. Motors have permanently lubricated ball bearings and all-direction, vibration isolating mountings to ensure vibration free operation and minimum noise. Motor wiring is enclosed by flexible metal conduit and connected to the junction box. All motors are performed in-house test and finished unit test again prior to shipment.

All unit sizes have both ends shaft for motor. The material of fan wheel is galvanized steel and mounted directly onto each shaft. The DIDW centrifugal fans have balanced and forward curved blades. Fan housings are made of galvanized sheet steel. The fan board can be simply removed by loosening the fasteners for easy service purpose.

■ Coil

Coils are 3/8 inch OD copper tubes mechanically bonded to Wavy 3B aluminum fin collars. A manual air vent with drain line to the drain pan is standard to avoid any water drips when venting. Standard coils are factory leak tested at 20 kg/cm² (20 Bar) and are recommended for operation up to 13kg/cm² (13 Bar) working pressure.

Coils are fitted with either sweat connection or female pipe thread connection. Cooling while coil has one set of connection, hot water heating option have two sets of connection.

Available coils are 3 row cooling, 4 row cooling, 6 row cooling, 3 row cooling + 1 row heating, and 4 row cooling + 2 row heating.

■ Drain Pan

The drain pan is 25mm depth with 0.8mm thickness galvanized steel c/w internal epoxy resin coating.

For sure without leakage occur, the fabrication of drain pan by one-piece stamping process with seamless and no joint. The standard insulation material is 5mm thickness, 27 kg/m³ density PE foam. The drain pan has one 3/4-inch male pipe thread (JIS B 0203-1966) connection.

Options

■ Heater

Two types of heating device are available: hot water and electric sheathed heating element. Please check technical data for such different types of heating capacity. Meet Australia safety code AS 1668.1 (Section 2.9), and AS 3102.

■ Plenum & Filters

The rear return air plenum and bottom return air plenum, with 9mm pu insulation as internal lining for fan motor noise reduction. A 25mm thick foam or aluminum filter is available for different types of return plenum.

■ S304 Stainless Steel Drain Pan

■ Blue Fin

The blue fin with vinyl-epoxy-based coating that has been tested under ASTM B117, and thus of higher corrosion resistance than aluminum fin stock.

■ Factory-mounted Control Valve Package

Factory mounted and tested for options of 2way or 3way control valve package, and provision with or without thermostat.

■ Trane Building Management System

The Tracer Summit™ system is designed for monitoring and control air conditioning system, lighting and other controllable devices for building.

Such Building Control Unit (BCU) manages all Unit Control Moduls (UCM) for different zones management. Each UCM performs scan on couples of HCCA equips ZN controller in specific zone and regularly report to the central system.

*The Trane Fan Coil...
...Invented by Trane
...Perfected by Trane*

Since 1885, Trane has been at the technological forefront of air conditioning. The company's pioneering spirit, commitment to research and pursuit of quality have made it a world leader in the manufacture of water chillers.

Over 60 years ago Trane produced the first fan coil unit and in so doing created a product which is now built worldwide. The universal acceptance of this product has prompted Trane to focus the same engineering experience to the fan coil as given to the refrigeration products.
